BAERCHI SHOES PRODUCTION

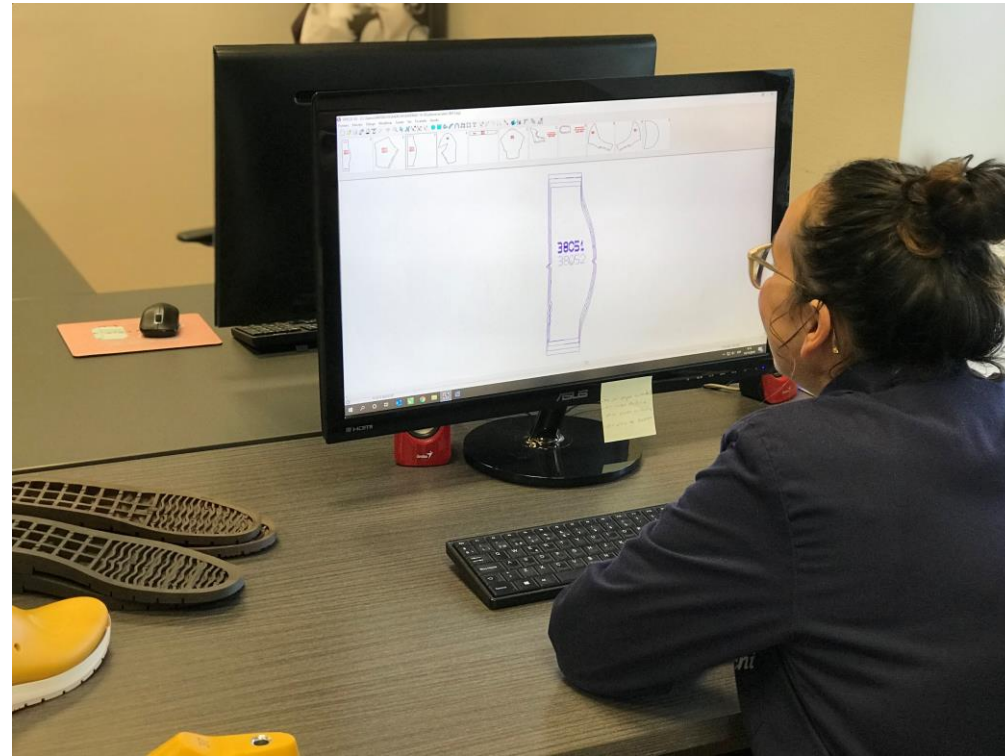

RAW MATERIALS

Our manufacturing process begins with the demanding selection of the raw material used.

DESIGN AREA and I+D DEPARTMENT

Shoes producing starts in the design area in which we develop our new models and new technology systems.

CUTTING AND SEWING AREA

In this area the leather is cutting by a long experience workers.

Once the leather is cut, all the pieces are joined by sewing in machine or by hand depending on the production process.

LASTING AREA

In this area shoes are assembling and lasting. We have two different lines ; one for men and one for ladies.

FINISHED AREA AND PACKAGING AREA

In this area we finish the shoes and pack the shoes and we make an exhaustive quality control of the shoes.

BAERCHI COLLECTIONS

Baerchi make two collections per year, Spring- Summer and Fall -Winter. Every season Baerchi make a new catalogue in which you can see new models , anyway some sections are changed every season and others are keeping many seasons.

PRODUCTION PROCESSES

CLASSIC LASTING

In Baerchi we have different production processes depending of the models we need to produce.

Classing lasting is the most usual, aprox. 60 % of our production. In this process the upper is joined to the sole with glue.

STROBER SYSTEM

In this process we sew the upper to the insole, after that we sew the insole to the sole and finally glued.

With this system we achieve more comfortable and durability of the shoe.

SEWING BY HAND

More than 40 years ago, baerchi patented sewing by hand shoes. Ecofriendly shoes, in the production we do not use any glues.

MOCASSIN LASTING

- Front upper is sewing like a glove and glue to the sole. To achieve comfort and flexibility.

SHOES TECHNOLOGY

- Our I+D department is always trying different ways of making shoes more resistant, flex and comfort.
- These are most important technologies of our shoes.
